BEST AVAILABLE IMAGES

Defective images within this document are accurate representations of the original documents submitted by the applicant.

Defects in the images may include (but are not limited to):

- BLACK BORDERS
- TEXT CUT OFF AT TOP, BOTTOM OR SIDES
- FADED TEXT
- ILLEGIBLE TEXT
- SKEWED/SLANTED IMAGES
- COLORED PHOTOS
- BLACK OR VERY BLACK AND WHITE DARK PHOTOS
- GRAY SCALE DOCUMENTS

IMAGES ARE BEST AVAILABLE COPY.

As rescanning documents will not correct images, please do not report the images to the Image Problem Mailbox.

DETAILED ACTION

Response to Amendment

1. Applicant's amendment of claims 1, 5, 9, 10, 14, 18, 19, 23, 30 has been fully considered and is entered.

Response to Arguments

- 2. Applicant's arguments filed 17 June 2004 have been fully considered but they are not persuasive. Applicant's argument that the Boebert and Deo references do not disclose key generation using a one-way function is not persuasive because Deo discloses that the encryption keys are generated using a Message Authentication Code (Col. 24, lines 32-
- 54). Message Authentication Codes are one-way hash functions.

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:
 - 1. Determining the scope and contents of the prior art.
 - 2. Ascertaining the differences between the prior art and the claims at issue.
 - 3. Resolving the level of ordinary skill in the pertinent art.
 - 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.
- 5. Claims 1, 3, 4-10, 12-32 are rejected under 35 U.S.C. 103(a) as being unpatentable over Boebert, U.S. Patent No. 5,502,766, in view of Deo, U.S. Patent No.

Art Unit: 2132

6,496,928. Referring to claims 1, 2, 5, 6, 8-10, 12, 14, 15, 17-27, 29-32, Boebert discloses a data enclave system wherein a workstation user's ID and PIN, stored in the memory of their Personal Keying Device (data-for-second-checking memory unit), is used to generate an encryption key (Col. 10, lines 22-34), which meets the limitation key generation unit for generating an encrypting key from data stored in the data-forsecondary-checking memory unit. The generated encryption key is the used to encrypted the access vector and media key that is stored in the storage search logic (data-for-mainchecking memory unit)(Col. 13, lines 42-57), which meets the limitation of an encryptor for encrypting data stored in the data-for-main-checking memory unit with the encrypting key generated by the encrypting key generation unit. Authentication protocols are executed with the use of two pseudo random number sequences (Col. 26, lines 44-47). The enciphered Media key and access vector pair arrives at the Crypto Media Controller and the Media ID is used as an index to store the enciphered pair packet in the Personal Keying Device of the user. The media can now be identified and the individual Personal Keying Device contains a media key which can only be used by someone who has physical possession of that Personal Keying Device, knows that individuals PIN, and has the Media of controlled by a Crypto Media Controller containing the enclave key (Col. 13, line 64 – Col. 14, line 13), which meets the limitations of the data verification between units. Boebert discloses that keys can be stored in a database (key memory) for later use (Col. 26, lines 8-13). Boebert does not disclose that the stored keys can be used to generate new keys. Deo discloses the use of old keys that are hashed with other data (data for secondary checking memory unit) to generate new encryption keys (Col. 24, lines 32-54), which meets the limitation of the encryption key generation unit also uses

Application/Control Number: 09/588,049

Art Unit: 2132

the previous key stored in the previous key memory unit in generating the encrypting key. It would have been obvious to one of ordinary skill in the art at the time the invention was made to use the old keys of Boebert to generate new keys in the manner of Deo in order to increase the difficulty of the key becoming compromised as disclosed in Deo (Col. 24, lines 57-68).

Referring to claim 4, 13, Boebert discloses that digital signatures can be used in the data enclave system (Col. 23, lines 50-53).

Referring to claims 7, 16, 28, Boebert discloses using symmetric encryption (Col. 9, lines 22 – Col. 10, line 10).

6. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Conclusion

Art Unit: 2132

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Benjamin E Lanier whose telephone number is 703-305-7684. The examiner can normally be reached on M-Th0 7:30am-5:00pm, F 7:30am-4pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gilberto Barron can be reached on (703)305-1830. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
